Art Unit: 2651

1. This Office action is in response to amendment filed 24 June 2005, which papers have been placed of record in the file.

2. Claims 1-11 are allowed over the prior art of record. The following is an examiner's statement of reasons for allowance:

Claims 1, 5, and 7 are allowable over the prior art of record since the cited references taken individually or in combination fails to particularly disclose a disk storage device comprising causing said drive signal to be input into said voltage feedback amplifier and causing an output from said voltage feedback amplifier to provide said input signal to said head-moving mechanism when a malfunction condition is detected, and causing said drive signal to be input into said current feedback amplifier and causing an output from said current feedback amplifier to provide said input signal to said head-moving mechanism when a malfunction condition is not detected, as presented in the environment of claims 1, 5, and 7. It is noted that the closest prior art, Ryan, shows voltage calibration for velocity control of the VCM that selects between voltage feedback and current feedback when a malfunction condition is detected similar to the claimed invention. However, Ryan fails to disclose causing said drive signal to be input into said voltage feedback amplifier and causing an output from said voltage feedback amplifier to provide said input signal to said head-moving mechanism, and causing said drive signal to be input into said current feedback amplifier and causing an output from said current feedback amplifier to provide said input signal to said head-moving mechanism as claimed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
